PROFESSIONAL SUMMARY

Results-driven **AI Automation Engineer** and **AI Agent Developer** with **3+ years of hands-on production experience** building intelligent workflow automation systems for startups in the **USA, UK, Germany, and Australia**. Deep expertise in **n8n, Make.com, and Zapier** for designing self-healing, event-driven pipelines that eliminate manual operations at scale. Proficient in building custom AI agents using **OpenAI and LangChain**, deploying ML models on **AWS SageMaker**, and engineering robust Python backends with **Django and FastAPI**. Proven track record with a **100% Upwork Job Success Score** and consistent **5.0-star client ratings** across CRM automation, outreach systems, and data extraction pipelines.

PROFESSIONAL EXPERIENCE

AI Automation Engineer

June 2025 – Present

Automyra AI · Full-time · Remote

- Design and deploy end-to-end AI automation workflows using n8n, Make.com, and Zapier, reducing manual operational overhead by automating high-frequency business processes.
- Develop custom AI-powered pipelines integrating OpenAI, LangChain, and multiple LLM providers for intelligent document processing, data extraction, and autonomous decision-making.
- Engineer full-stack applications with Django and Django REST Framework, including backend APIs and frontend management dashboards for real-time automation monitoring.
- Implement supervised ML models for predictive analytics, text classification, and NLP tasks to enhance automation decision intelligence.
- Architect reliable 24/7 automation infrastructure with comprehensive monitoring, structured logging, and alerting using CloudWatch and Slack integrations.
- Create multi-step workflows connecting CRMs, marketing tools, databases, and third-party APIs with robust error handling, retry logic, and idempotency guarantees.

AI Automation & Backend Engineer

Apr 2023 – May 2025

Techticks · On-site · Karachi, Pakistan

- Shipped 50+ production automation workflows in n8n, Make.com, and Zapier, connecting CRMs (Close CRM, HubSpot, Salesforce, GoHighLevel) and LLMs into cohesive, self-sustaining systems.
- Built a complex PDF data extraction microservice combining AWS Textract OCR, OpenAI and LangChain post-processing, and Pydantic schema validation — achieving 100% structured output accuracy.
- Engineered an end-to-end social media content assessment pipeline ingesting TikTok, Instagram, Facebook, and YouTube data via Apify, with AWS Comprehend for NLP, custom CNN models on SageMaker for visual analysis, and Whisper for multilingual speech-to-text transcription.
- Designed a multi-channel outreach automation system using Unipile and Dripify with OpenAI-personalized messaging, rate-limit-aware scheduling, reply detection, and CRM logging.
- Deployed and managed backend services on AWS (EC2, ECS, Lambda, SQS, S3) with Docker containerization, ECR image management, CI/CD pipelines, and CloudWatch observability.
- Implemented Notion-as-backend architecture for client-facing property management portals with real-time data sync and OAuth2 multi-tenant authentication.

Trainer — AI Automation & Backend Engineering

Jan 2024 – May 2025

Techticks · Concurrent Role · On-site

- Owned and delivered in-house engineering curriculum covering Python backend development, n8n/Make.com workflow design, LLM and AI agent orchestration, and AWS deployment.
- Mentored junior engineers through hands-on training modules, accelerating onboarding and improving delivery quality across automation and ML projects.

Backend & Automation Developer

2022 – 2023

Distack Solutions & Enigmatix Pvt Ltd · Contract

- Delivered REST API integrations, CRM automation workflows, and data pipeline builds for B2B clients across multiple industries.
- Developed and deployed Django and FastAPI backend services, integrated OAuth2 flows, and built custom webhook-driven event pipelines.

KEY PROJECTS

Property Management Owner Portal (Hostyo)

Production multi-tenant portal built with Next.js 15 and TypeScript using Notion as a headless backend. Hosts access live reservation data, payout tracking, expense reporting, and property-level performance dashboards — deployed on Vercel with role-based authentication and per-branch preview environments.

Vercel

Complex PDF Data Extraction Service

FastAPI async microservice that converts complex, mixed-layout PDFs (invoices, contracts, reports) into validated structured JSON with 100% accuracy. Combines AWS Textract for OCR, LLM-based field

normalization via OpenAI and LangChain, and Pydantic schema enforcement with a human-in-the-loop fallback and full audit logging.

Social Media Assessment AI/ML Pipeline

End-to-end assessment system ingesting creator content from TikTok, Instagram, Facebook, and YouTube via Apify. Routes to specialized analyzers: AWS Comprehend for NLP, custom CNN models on SageMaker for image/video frames, and OpenAI Whisper for speech-to-text — all orchestrated with Agno multi-agent framework.

Automated Multi-Channel Lead Outreach System

Fully automated lead generation and outreach pipeline combining Unipile and Dripify for LinkedIn and email campaigns. Leads are enriched, scored, and personalized with OpenAI before entering Dripify sequences — with reply detection, automatic campaign pause, CRM updates, and centralized Google Sheets reporting.

Brain Tumor Detector — Deep Learning Web App

Django web application for medical brain tumor detection using EfficientNet deep learning architecture. Provides real-time inference via a web interface with TensorFlow/Keras backend and dynamic template rendering for clinical use-case demonstration.

KEY ACHIEVEMENTS

- ✓ Maintained 100% Job Success Score across all freelance engagements on Upwork
- ✓ Achieved 5.0-star client ratings from international clients across USA, UK, Germany & Australia
- ✓ Held dual concurrent roles (Engineer + Trainer) at Techticks for 16+ months
- ✓ Delivered PDF extraction pipeline at 100% structured data accuracy using AWS Textract + LLM chain
- ✓ Built and deployed scalable social media AI assessment system processing content across 4 major platforms
